

YELLOW ATLAS

Predict the best prices at the locality!

Synopsis

The project's main goal is to estimate housing prices in an unidentified area. The longitude, latitude, and other attributes of a given location will be used to train machine learning models on six different selected metropolitan cities. The many characteristics include features like the number of bedrooms, resale, parking, and hospitals close by. Even more, we are creating various Scatter plot types that display the locations of homes with various price ranges.

◀ Horizon of Business ▶

The scope of the business is nationwide because is the basic need to buy houses/land and predicting their prices with utmost accuracy can help us to expand.
